Professional Summary: B.Tech Honors student with DRDO internship experience. Expert in Python/ML and production-ready Flask deployment. 5-Star Coder on HackerRank.

Experience

Summer Research Intern — DRDL, DRDO (Hyderabad) May 2025 – Jul 2025

- **Architected** an **offline-first NLP pipeline** to convert **200+ SRS documents** into test cases on **air-gapped hardware**.
- **Optimized** memory usage to run multiple local models sequentially, ensuring data sovereignty without cloud dependencies.
- **Reduced** manual verification effort by **60%**, validating the automated framework with senior scientists.

Open Source Contributor — HackerRank (Hiring Agent Project) Oct 2025 – Present

- **Contributed** to an open-source AI Hiring Agent, engineering the resume scoring logic to reduce bias in automated evaluation.
- **Optimized Jinja2 prompt templates** to inject context for programs like LFX and Outreachy, ensuring the LLM weighted them equally to GSoC.
- **Validated** scoring accuracy by running **local inference benchmarks with Ollama**, verifying that the updated prompt context eliminated the bias.

Projects

Heart Disease Screening System — ML Integrated Full Stack App Nov 2025 – Dec 2025

- **Deployed** an end-to-end Random Forest classifier (**88% accuracy**) on **Render** using a production-ready **Flask architecture**.
- **Implemented** secure **email-based authentication** (SMTP, Password Reset) and input validation to protect patient data access.
- **Optimized** the model for **High Recall**, tuning decision thresholds to minimize False Negatives in clinical risk screening.
- **Live Application:** heart-risk-ai-9fmk.onrender.com

ASL Alphabet Recognizer — Computer Vision & Latency Jan 2025 – Aug 2025

- **Architected** a real-time pipeline using MediaPipe for landmarks and a **deque-based smoothing buffer** to stabilize predictions across frames.
- **Optimized** inference latency to **<50 ms** on T4 GPU by utilizing mixed-precision training and lightweight feature extractors.
- **Achieved 95% accuracy** on 87k images by identifying and fixing lighting/blur bottlenecks through root-cause error analysis.

Education

B.Tech (Honors) in Computer Science & Engineering Expected May 2026

Chaitanya Bharathi Institute of Technology (CBIT), Proddatur

- **CGPA:** 8.3 / 10.0

Skills

Core: Data Structures & Algorithms (DSA), Problem Solving

Languages: Python, SQL, Java, C, JavaScript

Machine Learning: Scikit-learn, TensorFlow, PyTorch, Model Evaluation, Feature Engineering, EDA

Data Analysis: Pandas, NumPy, Matplotlib, Seaborn

Deployment & Tools: Flask, FastAPI, REST APIs, SQLite, Git, Linux, Streamlit

Certifications & Awards

- **Big Data Computing (Elite + Gold, Top 2%)** — NPTEL (IIT Kanpur)
- **Completed 40+ Labs & Skill Badges** — Google Cloud Skills Boost
- **Google Data Analytics** — Coursera
- **Supervised Machine Learning** — Stanford Online & DeepLearning.AI
- **Finalist, CMR Hackfest 2.0 (2025)**
- **5-Star Coder (Python)** — HackerRank
